

MULTIPLY

Preventing malaria in early childhood

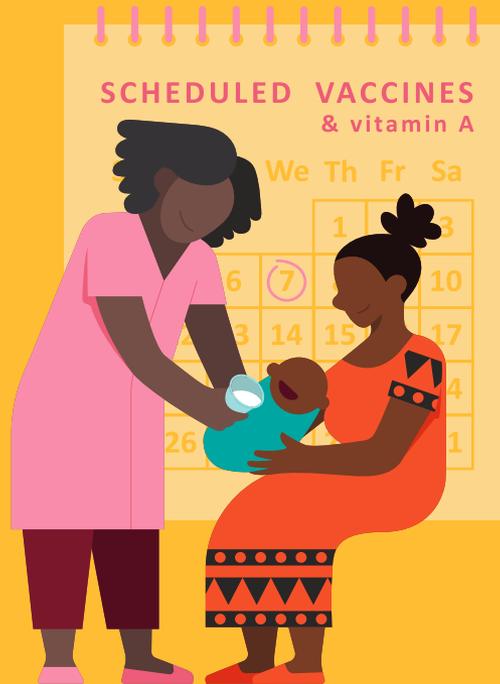

Pilot introduction to reduce malaria illness among African children under 2 years of age

June 2022

Perennial Malaria Chemoprevention (PMC)

reduces malaria illness by 30%.

MULTIPLY, working with the ministries of health in Mozambique, Sierra Leone and Togo, is giving up to 6 doses of SP in the first 2 years of life.

The WHO recommends giving Sulfadoxine-Pyrimethamine (SP) alongside scheduled childhood vaccinations in the first two years of life.
